

# Mastercare vs. "similar products"

## The uniqueness of Mastercare

**Moving back rest** (on wheels) transforms the body weight into traction power.

Inclination of **15°** or max. 30° for **safe treatment**.  
(will not go up-side-down, as it may be harmful)

The safety lock and 30° maximum inversion assure **safety** and **security**, allows **full control**.

With an inclination of 15° the traction force is big enough to effect a structural change and you are able to relax completely.

15° is a very **comfortable position** and can be **safely used** by nearly **all**, despite age or weight.

The 15° position also permits to combine traction with **useful exercises** to relieve pressure on the joints and stretch the muscles.

**Therapeutic exercise program** developed in co-operation with **Physical Therapists** and **Medical Doctors**.

Both **prone** and **supine** positions possible (Professional Model)

Both for **prevention** and **rehabilitation**.

Scientifically **tested** and **approved**. Several studies made.

Safety foot rollers (easy to get out if needed).

Low and secure.

Solid construction.

**CE**-registration; Medical Device, class 1.
