

The letter below is a report of ***İstanbul Ache Center*** (İSTANBUL AĞRI MERKEZİ) made by the Expert Physiotherapist **Bulent Ozsezikli** after a 1 month test on Mastercare.

(Translated from Turkish to English)

To whom it may concern,

After a one month test made on our patients, we understood that the traction that is gained by the weight of the patient is a force of traction which is useful to the body. The patients felt easiness at their back after mastercare treatments.

However, we met with variations in the blood pressure in the 80% of the patients and therefore our patients refused to try the machine again. This kind of complication caused an efficiency loss on this machine which gave a feeling of easiness at the back side of the body.

But I have to underline that our patients are 40 years old and over and they all suffer from back pains. Thus I cannot comment on the efficiency of Mastercare on other patients and sportsmen that are younger.

Yours sincerely,

Bulent Ozsezikli
Physiotherapist Expert
